This home owner in Sydney was looking for a low maintenance decking material and chose CleverDeck Walnut composite decking due to its good looks, value and the recommendation of the decking company that did the installation.

These fashionable townhouses in Ringwood, Victoria, were fitted with 138mm Slate Grey CleverDeck boards in order to add an extra touch of sophistication to the finished product. The builder was also looking to avoid the risk of tannin bleed (that occurs with most hardwood decking) running from his first floor decks over his newly rendered and painted walls below and CleverDeck provided the perfect risk-free solution.

This deck in East Doncaster, Victoria, is fitted with 138mm wide CleverDeck Mahogany boards that were used to replace an old rotting timber deck. The owners also added a cream coloured powder coated steel balustrade and polycarbonate roof to create a wonderfully classy, maintenance free outdoor room.

Wood Composite DIY Deck Tiles

Futurewood wood composite Deck Tiles are made from solid wood composite decking boards screwed to a polypropylene base. They do not require any oiling or painting and are exceptionally easy to install.

Features

- » Wood composite decking made from rice husks and wood flour mixed with recycled HDPE
- » Fully finished and ready to use
- » Easy to install – tiles clip together and can be laid directly over a concrete patio or any other solid sealed base
- » No splinters
- » Won't rot
- » Resistant to termites and white ants
- » Slip resistant
- » Mould and mildew resistant
- » Low profile (22mm in height) – ideal for balconies with open out doors
- » Ramp deck tile edges available (see website for more details)

Advantages over timber

Futurewood does not require painting, does not rot, splinter or lose its colour.

Futurewood looks like timber but is made from recycled HDPE (post industrial waste), rice husks and recycled hardwood timber so it is more ecologically sustainable than timber.

Environmentally friendly

Our range of products for fencing, decking and cladding applications are made from recycled and reclaimed materials.

Plus Futurewood timber alternative products do not require oiling, staining or painting so you can avoid the use of these chemical based products.

Cost effective

Futurewood products provide a cost effective alternative to traditional hardwood timber decking, fencing and cladding materials.

They are quick and easy to install, come in standard lengths and do not require regular maintenance.

Futurewood, the low maintenance timber alternative.
