

Tractio Decking

PR-DECK-COM-140x22-HIC-C-SLT & PR-DECK-COM-140x22-MSQ-C-SLT

Groundbreaking strength, seamless style

A trailblazer in decking, Tractio's breakthrough technology delivers strength and stability like never before. Enjoy the beautiful, streamlined look of a modern timber deck – with the lasting confidence that comes with powerhouse materials and manufacturing.

Incredibly tough, lightweight and durable, the polypropylene decking is unlike other decking material on the market. Made with patented Eovations technology, it provides one of the industry's best strength-to-weight ratio, is water resistant, and has virtually no thermal expansion or contraction.

This all adds up to low-maintenance performance that's ideal for any conditions, particularly wet areas. It combines beautiful timber looks with materials that won't splinter, sag, crack, fade or stain – unlike other composites.

Since its creation, Eovations technology has perfected the substrate found in Tractio decking. This process starts with a mixture of polypropylene and calcium carbonate that's pulled extruded for cavitation. Cavitation creates tiny air pockets that keep the boards lightweight, but with a fibre-like structure similar to other composites – giving it unmatched strength.

Tractio deck boards can be installed in wet areas such as bridges, boardwalks, boat docks, and pool decks. It is weather-resistant and provides superior UV protection.

Easy to handle and install, Tractio also has stylish side-benefits. While consistent spacing between boards is recommended to allow water runoff, the absence of thermal expansion or contraction means that end gapping isn't an issue – providing a clean, seamless finish when installed.

Available in chic Dusky, warm Mesquite or golden Hickory, Tractio is elegant and contemporary – with the versatility to invigorate any outdoor or entertaining space.

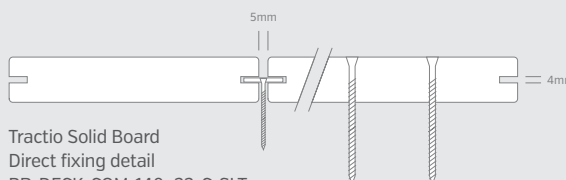

Profiles

Lasting looks, unprecedented strength, simplicity and longevity, Tractio decking is perfect for:

- External Ramps including sloping driveways
- Wet/pool areas
- Heavy traffic areas*
- Unsheltered areas
- Domestic and commercial areas*
- Hotel/bistro areas*
- Harsh environments
- Body corporate areas
- Mining campsite decks*
- Jetty and pontoon walkways.

Ground-breaking benefits

Breakthrough strength and stability

Patented technology delivers the industry's best strength-to-weight ratio – with little thermal expansion or contraction.

Moisture and weather resistant

It can be used in wet areas such as pool decks and offers good UV protection.

Ease

Lightweight and easy to handle. No ongoing maintenance worries or need to apply weather protectants or water seal products, if kept clean.

Smart alternative to other composites

Tractio has many of the benefits over other composites as is less likely to splinter, sag, chalk or crack.

Long-lasting looks

The durable polymer cap stock is resistant to staining or fading.

Made from tough stuff

Made from a blend of polypropylene and durable mineral filler, its internal fibre-like structure is similar to composites – bringing a robust stability that other thermoplastic deck boards simply can't match.

Two profile options

Slotted-edge decking gives a clean, fastener-free appearance, while the solid-edge profile is ideal when board edges are visible, such as a picture-frame boards or stair treads.

Slip Resistance

Classification of New Pedestrian Surface Materials AS 4586-2013 Appendix A [Wet Pendulum Test] Class: P4
